

JPW - Made in the USA

JPW products are famous for how they work and last.

Paco Pads are made with the highest quality high density open cell urethane foam, which does not break down over time. Corner reinforcements are standard. This may be the last camping pad you will ever buy.

Our Dry bags are used by most Western River Outfitters because of their durability and simple but effective roll down closure system. Stainless steel D ring patches and heavy duty boat handles are welded to the bag, and straps are stitched through coated web that helps make the great closure system work.

We use real inflatable fabrics in our boat constructions. That means there are no bladders, or coatings where they are not needed, and double layers of heavy duty fabric where it is. Stainless steel D rings, baffle systems, grommet strips, and other stress points are welded to the hull. We have the only welded Drop stitch ISUP in the industry. It is only natural that we use this same technology on raft floors, which gives our rafts the best hull speed of any self-bailer out there. We have continued to test and upgrade these systems since we started making inflatables in 1988. Our boats are the most maintenance free inflatables on the market, and carry a 10 year warranty. Just ask one of our customers how long they last- going on 26 years for some!

JPW uses the latest design software, the best materials, welding, and cutting equipment available. We are constantly striving to understand the needs of our customers, and we are bringing innovation to the industry. It is hard to keep up with changes in the print media, so new product changes are posted on our web site on a regular basis.

All of our products are made right here in the USA using Radio Frequency, and Hot Air welding Technology that is thoroughly tested by us, and by our customers. There is no glue to fail in our air holding structures, or attachment points. We have the only Welded Inflatable Stand UP Paddle Board on the market. We can offer the best ISUP warranty in the industry (5 years) because there is no glue to fail in the air holding structure.

Industrial and Environmental Products

Pictured here are two of our most successful products. They are foam walled spill containments, and a rapid deploy spill containment. The rapid deploy unit has saved Oil and Gas companies tens of thousands of dollars in EPA cleanup costs. And down time at well sides and on the road.

We also make culvert plugs, portable water tanks for fighting fires, Inflatable structures, and test articles for NASA's commercial crew program. We have been building prototypes for 30 + years. If you have an idea, we may be able to help with inflatable technology.
